### Track Rail Guard & Adjusters

Durable track rail guards keep tracks in place. Track adjustment is made easy with standard grease cylinder track adjusters and shock absorbing springs.

### Cummins QSB6.7 Engine

With 6-cylinders, turbo charger and intercooler, the Cummins QSB6.7 diesel engine is built for power, economy and reliability. This engine meets TIER 3 / EU stage IIIa emission regulations.

### The Definition of Progress

The Quantum System B-series 6.7-liter engine combines full-authority electronic controls with reliable performance.

To control these high-horsepower products, electronics are developed for the most demanding environment, including dusty and other heavy applications, to meet worldwide emissions regulations.

Increased power, improved transient response and reduced fuel consumption are the results of a QSB6.7 engine, equipped with 24 valves, centered injectors, a symmetrical piston bowl and an improved airflow.

### Strong and Stable Lower Frame

The reinforced box-section frame is welded using low-stress, high-strength steel. The X-leg type center frame is integrally welded for maximum strength and durability.

# Unique Hydraulic System

Powerful and precise control with a straightforward design.

## Advanced CAPO System

The advanced CAPO (Computer Aided Power Optimization) system tunes engine and pump power to optimum levels. Multiple mode selections are implemented for specific applications, maintaining high performance while reducing fuel consumption. Additional features include auto deceleration and power boost.

The LCD-display monitors engine speed, coolant and hydraulic oil temperature and through the self-diagnostic capability, it displays current error codes.

## Multi Function Color LCD-Display

Engine Overheat  
Prevention

Automatic Warm-Up  
System

### Optimum Hydraulic Performance

Increased pump output capacity through a fine-tuned flow according to the pressure in the hydraulic system.

### Auto Deceleration System

When joysticks or travel pedals are in the neutral position during more than 4 seconds, the engine speed will be reduced to 1000 rpm. After 60 seconds, engine speed is automatically reduced to low idle. In this way fuel consumption and cab noise levels are reduced.

### Boom & Arm Holding System

Holding valves in the main control valve prevent unexpected boom & arm lowering.

### Boom & Arm Flow

#### Regeneration System

The flow regeneration valve saves fuel and increases productivity without cylinder cavitation.

### Hydraulic Dampers in Travel Pedal

Smoother and improved travel controllability has been achieved via shock reducing components.

### Pump Flow Regulation

Without activating hydraulic functions, the pump flow is minimized to reduce power loss. During operation, optimum pump flow is delivered to the actuator to increase speed. Movements of the joysticks automatically adjust pump flow, with actuator speed controlled proportionally.

### Power Boost System

In power mode, the digging forces increase automatically about 10% when necessary. In standard and economy mode the Power Boost system can be activated manually.

### One-Touch Deceleration System

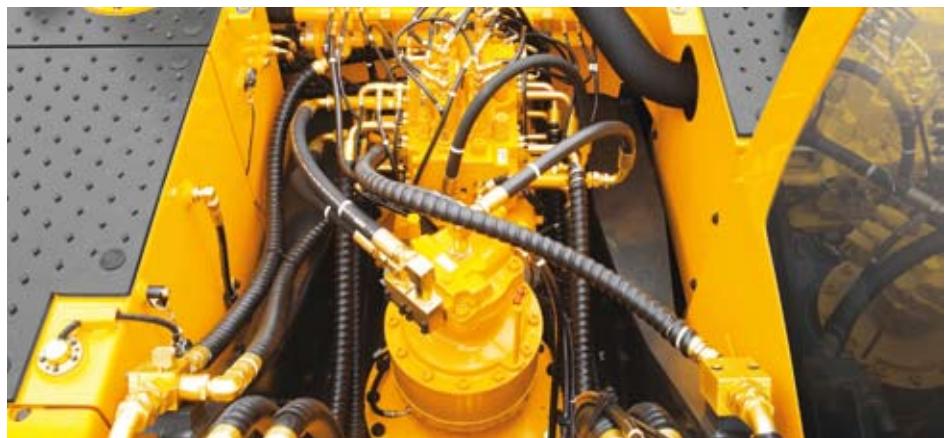

When the one-touch deceleration switch is engaged, the MCU limits the engine to idling speed. When the one-touch deceleration switch is disengaged, the engine speed recovers to preset rpm.

### Self-Diagnostics System

The MCU diagnoses problems in the CAPO system caused by electric and hydraulic malfunctions and displays the corresponding error code on the LCD-display. The information on this display, including engine rpm, main pump pressure, battery voltage, hydraulic temperature and the status of electric switches, allows the operator to know the operating conditions of the machine. This facilitates troubleshooting problems that may occur.

### Attachment Flow Control System

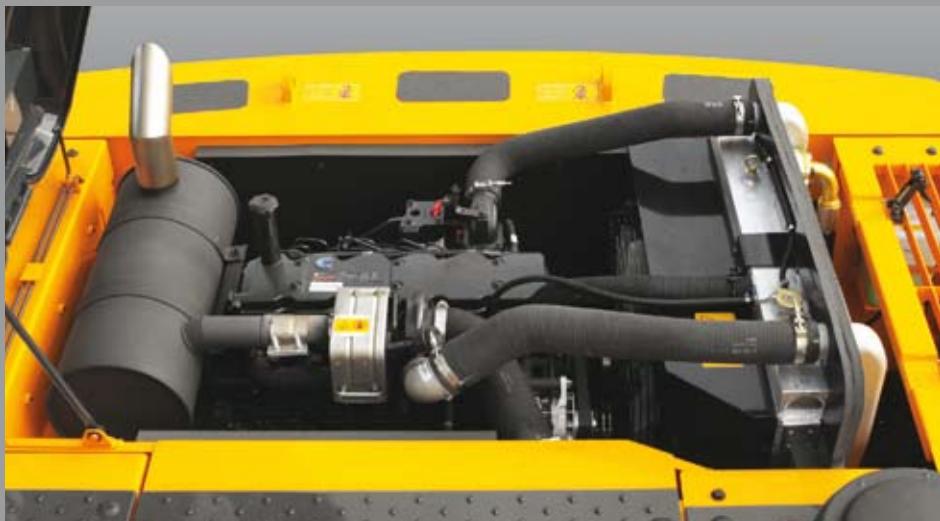

In attachment mode, maximum hydraulic pump flow can be preset. During operation, the hydraulic pump flow can be adjusted in steps with the toggle-switch.

# Reliability & Maintenance

## Centralized Grease Fittings

Grease fittings are centralized and well accessible for easy service.

## Easy Maintenance Components

Cooling and pre-heating systems are designed for a quick start-up and an optimal operation, guaranteeing longer life of engine and hydraulic components. Servicing engine and hydraulics has been considerably simplified due to improved accessibility.

### Open Arrangement of Cooling and Electrical compartment

Unrestricted access to vital components allows easy maintenance and repairs.
