

Volvo Construction Equipment is different. It's designed, built and supported in a different way. That difference comes from an engineering heritage of over 175 years. A heritage of thinking first about the people who actually use the machines. About how to help them be safer, more comfortable, more productive. About the environment we all share. The result of that thinking is a growing range of machines and a global support network dedicated to helping you do more. People around the world are proud to use Volvo. And we're proud of what makes Volvo different – **More care. Built in.**

Not all products are available in all markets. Under our policy of continuous improvement, we reserve the right to change specifications and design without prior notice. The illustrations do not necessarily show the standard version of the machine.

MORE CARE. BUILT IN.

VOLVO DOUBLE DRUM COMPACTORS DD70, DD70HF

HIGH PERFORMANCE, HIGH VISIBILITY

It's easy to see why the DD70 and DD70HF vibratory asphalt compactors work so well on roadways and other medium-sized paving jobs. Both the standard model and the DD70HF feature unobstructed visibility of the drum edges and work surface, along with the highest rolling productivity in their weight class. These models are easy to operate, offer adjustable vibration on / off speed settings, an ergonomic console, and the most reliable water spray system in the industry. The operating weight of the DD70 compactors also meets most DOT static rolling requirements, so you get the most out of your machines.

Performance Features

- Eight amplitude settings achieve required compaction throughout deep lifts and / or stiffer mix designs
- Eccentric rotation automatically matches direction of travel, improving smoothness
- Five-position rotating operator's station with an adjustable seat provides a smooth ride and comfortable operating environment
- Patented Impact Spacing Meter provides a visual reference for speed control to maintain proper impact spacing, resulting in consistent smoothness
- Two complete, independent water systems include triple water filtration, four water pumps, four spray bars, and variable waterflow
- Exclusive machined drums with chamfered, radiused drum edges minimize drum edge marking and facilitate finish rolling
- High frequency vibration system offers faster rolling speeds for increased production while maintaining proper drum impact spacing

Standard Features

- 5-position rotating operator's module with adjustable console for improved visibility and comfort
- Adjustable vibration on / off speed settings at 0,8, 1,6, 2,4, 3,2 kph (0.5, 1, 1.5, and 2 mph) for improved vibration control
- Eccentric rotation automatically adjusts to coincide with direction of travel, improving smoothness
- Exclusive machined drums with chamfered, radiused drum edges to maintain
- uniform smoothness while turning • High curb clearance and narrow wall clearance
- High frequency vibration system offers faster rolling speeds for increased production
- Industry-leading eight amplitude selections optimizing performance and versatility
- · Patented Impact Meter for consistent drum impact spacing and smoothness
- ROPS / FOPS with integral work lights and operator seat belt
- Superior drum spray system for maximum productivity
- Infinitely variable waterflow control to conserve water
- Independent primary and secondary spray systems on each drum
- Unobstructed visibility of drum ends and work surface
