

TM1060. Enrich your farming.

Your land deserves the lightest touch

Over 50% of the carbon footprint in food production is produced by farming

According to recent research into the food industry's environmental footprint, farming cultivation accounts for a significant proportion of CO₂ emissions in food production.

As a consequence, it is essential that the agricultural industry plays its part in boosting performance through the reduction of its environmental footprint.

Example of Cereal based food production

Lower is better

*GWP = Global Warming Potential:
it represents emissions' contribution to the global warming and climate change on earth.

Trelleborg TM1060. Enrich your farming

Trelleborg tyres reduce your tractor's CO₂ emissions by 6%

The new BlueTire™ technology, recently launched by Trelleborg, guarantees the lightest touch on the earth.

As illustrated in the chart below, the Blue Tire technology represents a 6% reduction in carbon footprint over the working life of a Trelleborg tyre.

*GWP = Global Warming Potential

TM1060. The 3 key features of ProgressiveTraction.™

The unbeatable performance of the Trelleborg ProgressiveTraction™ is testament to its innovative double edge lug.

While its two points of anchorage boost grip, the stronger base of the lug significantly reduces vibrations, wear and fuel consumption.

In addition, the double edge lug also enhances the inter-lug terraces of the TM tyres, maximising the self-cleaning capability of the tyre.

1

Dual anchor

The grip performance is enhanced by 2 anchor points

2

Reduced vibrations

For a standard tyre, the lug behaves like a “brush”. This accelerates the wear and increases the rolling resistance. The wider base of the ProgressiveTraction™ lug ensures a higher resistance to lug vibrations.

Standard Tyre

ProgressiveTraction™

3

Enhanced Self-cleaning

The extra lug acts as an additional terrace on the unique Trelleborg TM tread profile, enhancing its great self cleaning capability and increasing the efficiency of the lug.

Unrivalled tread design

The new TM1060 tread design merges the best qualities of Trelleborg's agricultural radial products. Whilst the wing effect maximises the tread width, ensuring an extra wide footprint, the ProgressiveTraction™ technology boosts the traction capability. Furthermore, the increased sidewall flexibility leads to very low soil compaction without impacting on the superior tyre strength.

Tyre tread key features

ProgressiveTraction™

Trelleborg lug head design ensures a long life

The **interlug terraces** maximise self-cleaning

The **“wing effect”** enlarges the tread width

Dual angle lug shape increases traction & comfort

Extra sidewall flexibility

Additional efficiency

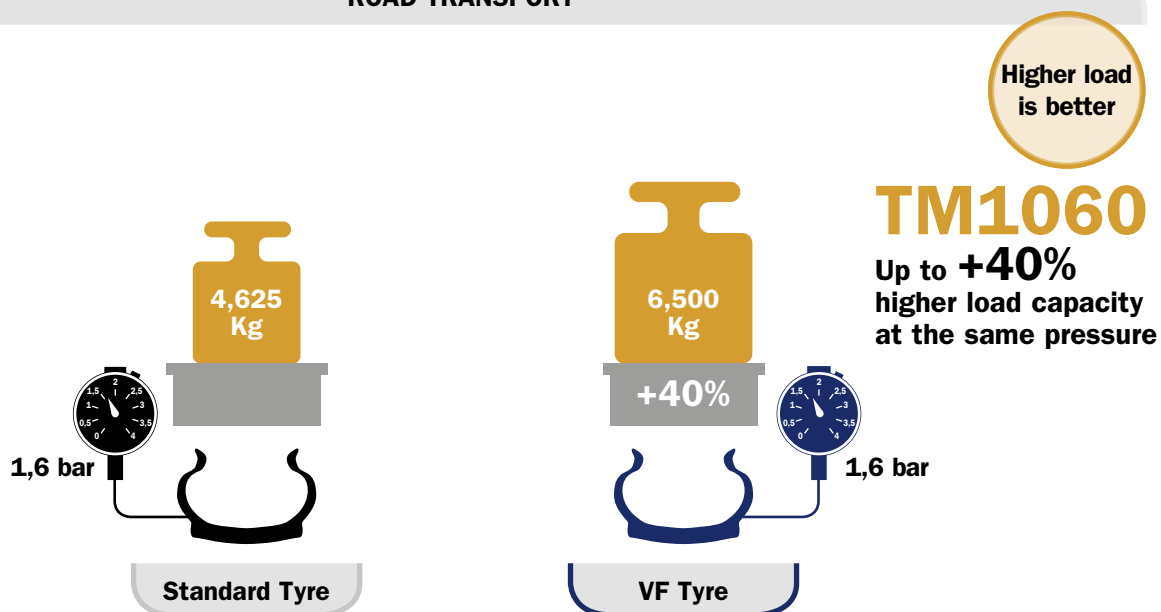

The TM1060 features a higher load capacity compared to the same sizes in Standard technology. The Trelleborg /60 series is a step ahead with regards to tyres for medium and high power tractors, allowing the same load at lower

pressure or a higher load at the same pressure. The graphic below clearly shows the performance gap between 710/60R42 in Standard and VF versions.

FIELD APPLICATION

ROAD TRANSPORT

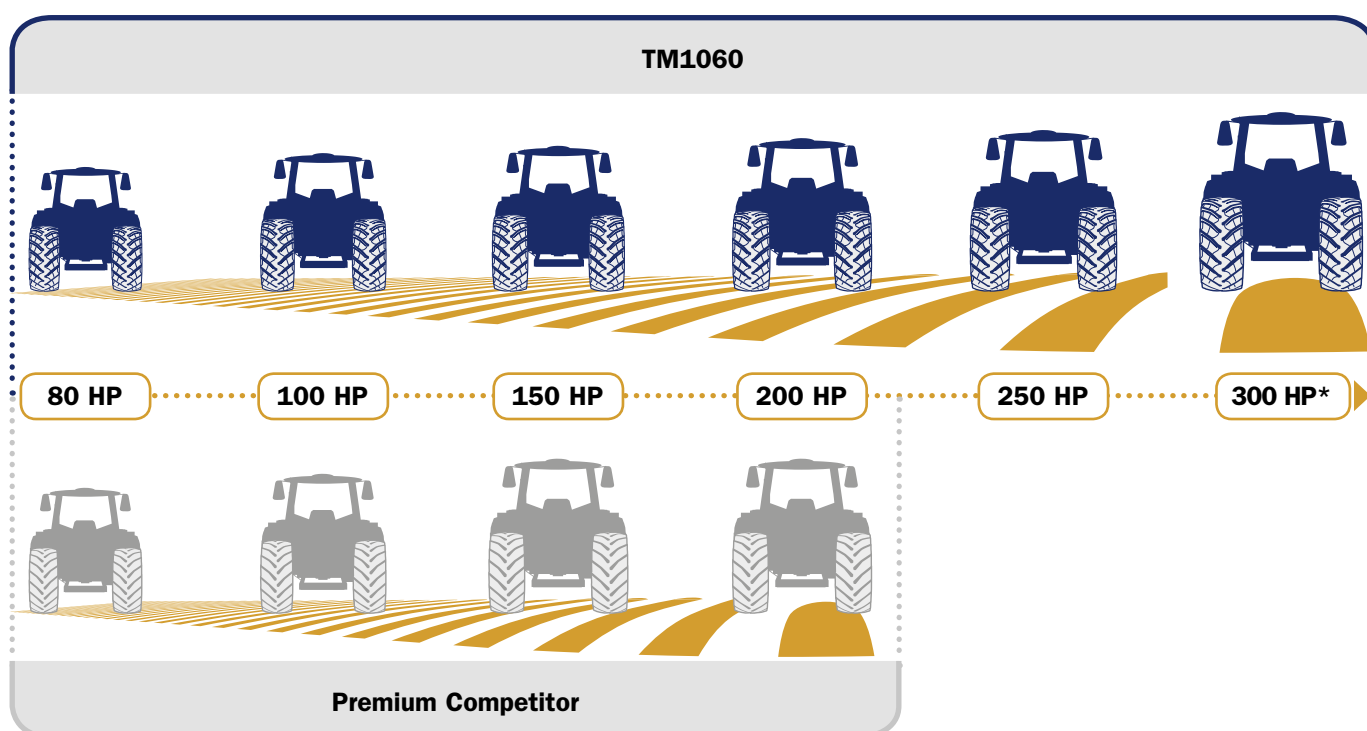

Wider tractor option

Without increasing the dimensions of the tyres, the new TM1060 provides superior performance compared to the existing /60 series available on the market, being able to equip tractors up to 300hp - even using a narrow rim option.

Indeed, the high load capacity of this range permits the transfer of torque generated by modern transmissions of high powered tractors to the ground.

* refers to size VF 710/60R42

A multipurpose efficient solution

Modern farming requires overall efficient solutions. In this respect, the new Trelleborg TM1060 is the complete multipurpose tyre able to satisfy the different needs of present and future agricultural operations. It is the perfect solution for those applications requiring low compaction and a wide

footprint like seeding and soil preparation, as well as for applications where high torque transfer is necessary, such as ploughing and tillage. Last, but not least, it guarantees low fuel consumption and emissions on the road.

FIELD

ROAD

The widest footprint

The FEM Analysis (Finite Element Analysis) shows the degree of compaction gets rapidly worse and much deeper with a narrow tyre. Recent research proves that at a 10 cm depth the soil compaction is double with the narrow solution and becomes triple at 30 cm depth. The wide TM1060 tyre provides very low soil compaction, boosting the yield from the crops.

LOW SOIL COMPACTION BOOSTS THE YIELD FROM CROPS

Narrow Tyre
Size: 520/85R42

TM1060
Size: VF 710/60R42

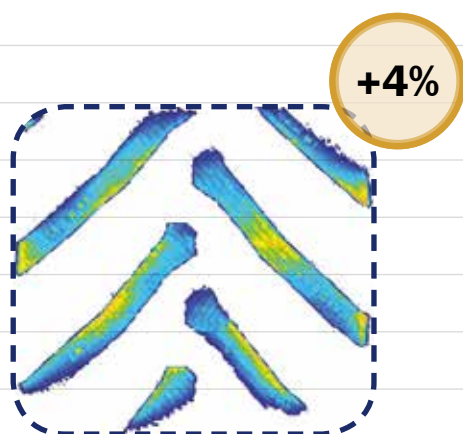

Test Conditions
Soil characteristics:
texture = sand 18% - silt = 47% - clay = 35%
pH: 7.3 - O.M.: 2.0%
Soil moisture: 18% - 20%

Even pressure distribution

The larger footprint area of the TM1060 minimises soil compaction, boosting the global efficiency and productivity of farming operations. The picture below shows the even pressure distribution of Trelleborg VF 710/60R42, compared to a premium brand Competitor.

FOOTPRINT COMPARISON Reference size: VF 710/60R42

TM1060

Premium Brand Competitor

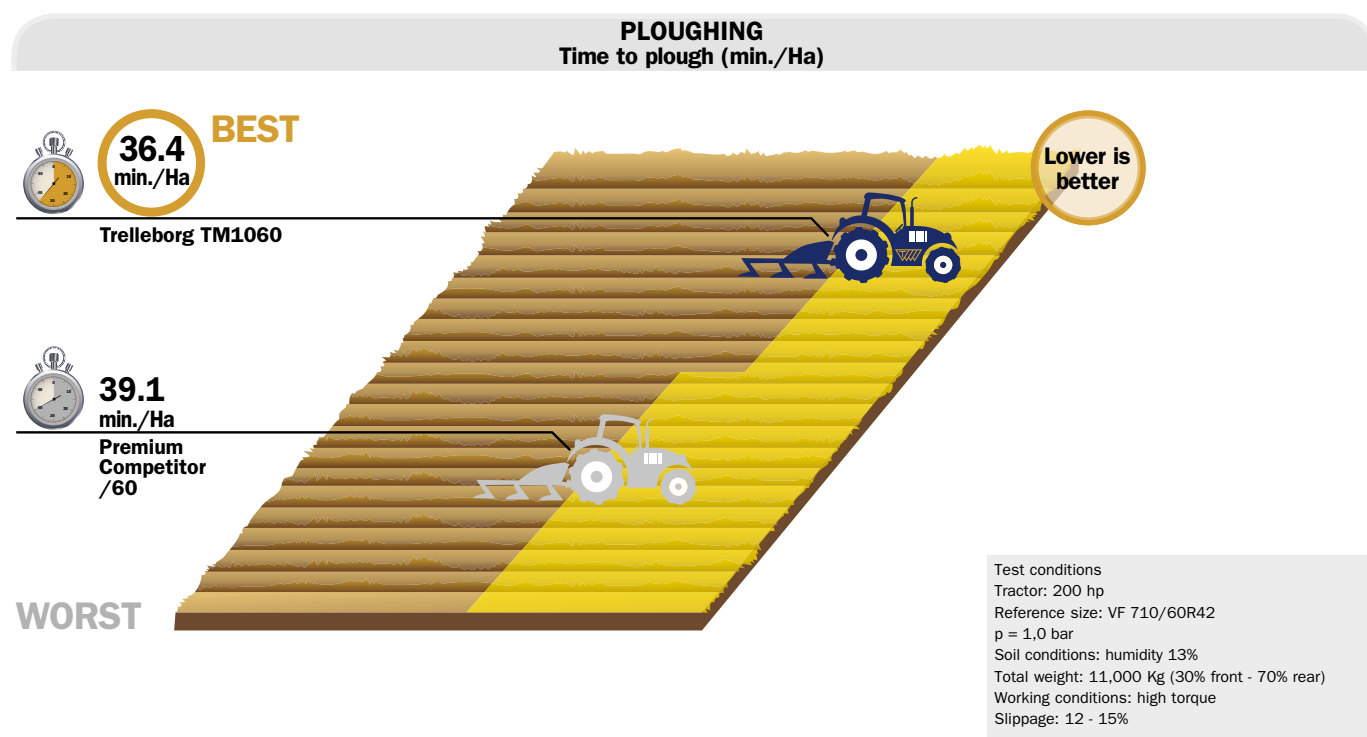

Test Conditions
Load: 4,625 Kg
p = 1,0 bar

Superior traction performance

During ploughing operations, the TM1060 reduces working time per hectar. This results in lower emissions and significant overall savings,

including costs such as fuel, maintenance and manpower.

TIME TO PLOUGH 500 Ha (vs. premium Competitor)

up to **23**
hours saved

=

1,750 € saved

- Average working costs per hour = 75 €
- Including cost evaluation related to the tyre wear performance

Premium road performance

The reduced “brush” effect of the lug prevents the energy dissipation, positively influencing the rolling resistance. With this reduction of wasted energy, the fuel consumption is reduced

and the lifetime of the tyre increases as much as 350 hours vs. a premium Competitor. The outcome is a reduced total cost of ownership of the tyre.

MILEAGE AND FUEL CONSUMPTION 50% field - 50% road

Test conditions
50% road, 50% field
Tractor: 200 hp
Fuel cost: 0.65 €/lt

Your TM1060 uses
5% less fuel and lasts
350 hours more than a
premium Competitor

On the road, save up to
900 € after 1,000 hours
vs. a premium Competitor
